Norland Index Matching Liquid 150

Norland Index Matching Liquid 150 is a low viscosity liquid monomer that can be used as an index matching media for temporary splicing using the Norland Optical Splice. This material will not cure and will always remain a liquid.

Typical Properties	
Appearance	Light yellow liquid
Viscosity	100 cps
Refractive Index nD	1.52

Normal index matching silicone fluids and gels can cause adhesion problems because once it contacts a surface it is very difficult to remove all traces. Our IML 150 can be removed with acetone.

Available in 6cc syringes (P/N 9006).
